## PERSONAL PROJECTS

### Eye Tracking: Enhancing Cursor Control and Accessibility

- Cursor movement via eye, also known as eye tracking, is a technology that enables users to control the movement of the cursor on a computer screen using their eye movements.

### Predicting House Prices: A Machine Learning Approach

- In this project, I have developed a simple machine learning model On sample Database . The goal was to create a model that could accurately estimate.

### Building a Comprehensive Hospital Website

- In this project, I embarked on the development of a robust and user-friendly hospital website aimed at improving patient experience and facilitating access to healthcare services.
